CAREER OBJECTIVE

Motivated and detail-oriented Computer Science and Engineering student with a strong foundation in software development, core programming, and algorithmic problem-solving. Eager to leverage technical expertise in C++, Python, and emerging technologies through an impactful internship. Aiming to contribute to innovative software solutions while rapidly adapting to and mastering new engineering workflows.

EDUCATION

Parul University

Vadodara, India

Bachelor of Technology (B.Tech) – Computer Science & Engineering (CSE Core)

- **Timeline:** 2025 – 2029 (Current: 2nd Year, 3rd Semester)
- **Academic Performance:** Cumulative Grade Point Average (CGPA): **8.45 / 10**

TECHNICAL SKILLS

Languages: C++, Python, Java (In Progress)

Core CS Concepts: Data Structures & Algorithms (DSA), Computer Fundamentals, Object-Oriented Programming (OOP)

Tools & Suite: Git, GitHub, MS Office (Word, Excel, PowerPoint)

Soft Skills: Analytical Problem Solving, Technical Communication, Agile Teamwork, Leadership, Rapid Adaptability

ACADEMIC PROJECTS

Smart Attendance System using Face Recognition

Python, OpenCV, Tkinter

- Developed a desktop-based automation GUI application designed to accurately log student attendance utilizing computer vision principles.
- Leveraged OpenCV libraries for real-time facial feature extraction and frame matching against an pre-enrolled SQL database.
- Engineered backend logic to automatically compile and export custom daily presence metrics directly into formatted Excel/CSV spreadsheets.

Automated Library Management System

C++, File Handling, OOP

- Designed and executed a robust command-line portal to systematically manage inventory tracking, automated book issuance, and late return penalty computations.
- Strictly adhered to robust Object-Oriented Programming (OOP) architecture blueprints to optimize memory tracking and maintain structural reusability.
- Integrated stable system persistence layer via standard dynamic file handling structures to cleanly catalog member profiles and active asset counters.

Algorithmic Pathfinding Visualizer

Python, Pygame

- Built an interactive graphical runtime environment to map out classic graph-traversal logic variants, specifically Dijkstra's and A* Search paradigms.
- Empowered active users with capabilities to place dynamic perimeter grids, custom maze walls, and track structural execution efficiencies in real-time.
- Constructed the underlying logic map explicitly to study optimal algorithmic space complexities and practice advanced algorithmic operations.

AREAS OF INTEREST & EMERGING TECHNOLOGIES

- Software Development Life Cycle (SDLC) Frameworks
- Artificial Intelligence & Machine Learning Fundamentals
- Advanced Data Structures & Algorithms (DSA)
- Applied Computational Mathematics

LANGUAGES

- **English** (Professional Working Proficiency)
- **Hindi** (Native or Bilingual Proficiency)
